Subject: 100 year service life certification for product approval of the CIPMH™-Chimney Liner

Dear Mr. Norris:

We appreciate the opportunity to provide you with a 100 year service life certification for the CIPMH™ Chimney Liner manufactured by LMK Enterprises Inc. Please review this letter and the attached supporting documentation for final product approval.

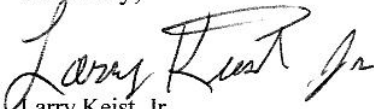

Based on the test data and the characteristics of Silicate based resin the CIPMH™ Chimney Liner will maintain its physical properties for a minimum 100 years.

The 100 year service life certification is based on the following:

- The CIPMH™ Chimney Liner is designed to exceed the hydrostatic pressures experienced on manhole chimneys. See attached design calculations.
- The capabilities of the silicate resin are such that the tensile, shear and peel strengths will typically lead to failure of the substrate before failure of the bond line.
- The CIPMH™ Chimney Liner is resistant to cracking and failure under extreme freeze thaw cycles. See attached report.
- The Contractor must install the system in accordance with the manufacturer's recommendations which includes preparation, wet out, and installation. See attached specifications.
- That the QA/QC program outlined by the manufacturer be strictly met. See attached engineer report.

We believe that if the above items are utilized, the design and installation is customized to the actual field conditions, that the CIPMH™ Chimney Liner will add significant structural integrity and eliminate further deterioration and inflow while achieving a 100 year service life under normal conditions.

Sincerely,

Larry Keist, Jr.
